

Table 4.extra Logistic and proportional odds models to predict the histology at resection for testicular cancer patients (n=821). Odds ratios reflect clear non-proportionality.

Categorization	Benign vs ter/cancer	Benign/ter vs cancer	Proportional
No teratoma in primary tumor	2.7	0.92	1.9
Normal AFP serum level	2.8	1.62	2.2
Normal HCG serum level	2.0	1.0	1.6
Transformed standardised value of LDH*	2.3	0.79	1.6
Transformed postchemotherapy mass size [†] (mm)	0.77	0.84	0.79
Reduction in mass size (per 10%)	1.15	1.03	1.07
